

The first and main cutter is on the throttle. Only half the throttle opens. It has been cut into the butterfly. It's easy to leave. has a sheet that terminates the throttle wire in the butterfly.
Cut or curled this plate (sheet)
The belt in the suft has a cutter and does not let it open.
At the front of the compiler
Put out this wheels Or only the plastic one

And then you went out to get a catalyst to breathe the motor
It also has a sieve in the final but it does not affect much. Cut it aside, but the sound is slightly up

Cut this
